| $\begin{aligned} & \text { Student__________________ } \\ & \text { Faculty______ } \\ & \text { Date___ } \end{aligned}$ | COMPRESSION TESTING |
| Aim of test: <br> - To present the methodology for compression testing <br> - To plot the stress - strain curve in compression for steel <br> - To calculate the ultimate strength in compression for grey cast iron. <br> The specimen <br> Height: $L_{0}=20 \mathrm{~mm}$ <br> Diameter: $d_{0}=20 \mathrm{~mm}$ <br> Cross section area $=$ $\qquad$ $\mathrm{mm}^{2}$ <br> Measurement of shortening $\Delta L_{i}$ : using two $0.01 \mathrm{~mm} /$ div. dial gauges | Hydraulic compression testing machine with a maximum load of 600 kN |
| Formulae <br> Based on the values ( $F_{i}, \Delta L_{i}$ ) obtained experimentally, one calculates: <br> The normal stress $\sigma_{i}=\frac{F_{i}}{S_{0}}$ <br> The normal strain $\varepsilon_{i}=\frac{\Delta L_{i}}{L_{0}} \cdot 100$ [\%] <br> $F_{i}$ is the force for which the extensometer registers the shortening $\Delta L_{i}=L_{i}-L_{0}$ | Failure modes: a) steel, b) cast iron |

## Results for the steel specimen

| Compression <br> force $F[\mathrm{~N}]$ | Left dial gauge <br> shortening <br> $\Delta L_{s}[\mathrm{~mm}]$ | Right dial gauge <br> shortening <br> $\Delta L_{d}[\mathrm{~mm}]$ | Average shortening <br> $\Delta L=\frac{\Delta L_{s}+\Delta L_{r}}{2}$ <br> $[\mathrm{~mm}]$ | Normal <br> stress <br> $\sigma[\mathrm{MPa}]$ | Normal strain <br> $\varepsilon[\%]$ |

## The stress strain curve must be plotted and attached to this paper

## Results for the cast iron specimen

Failure force in compression: $\qquad$ N

Ultimate strength in compression: $\qquad$ MPa

## Observations

1. The steel specimen deforms elasto-plastically taking the shape of a barrel.
2. On the stress - strain curve, a proportionality limit of $\qquad$ MPa was noticed
3. The Young's modulus, obtained as the slope of the linear part of the stress - strain curve has a value of $\qquad$ MPa.
4. Cast iron exhibited a fragile failure, cracks at an angle of $45^{\circ}$ with respect to the generatrix of the cylinder being noticed
5.
